

MSE for PCR and PLS

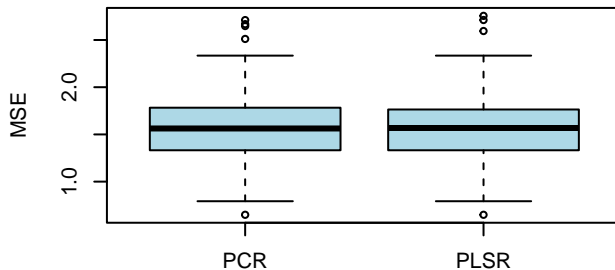

Case I: 1 variable has strong connection with the response variable

(Change in % MSE b/n PCR and PLSR): 1.02 %

MSE for PCR and PLS

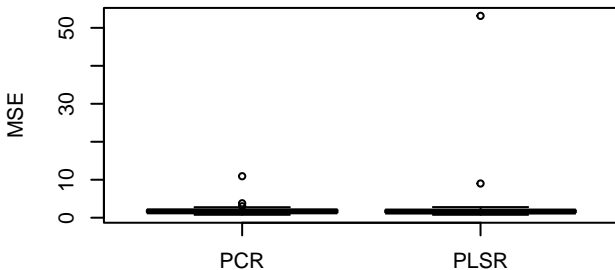

Case II: 1/3 of the dataset has high correlation

(Change in % MSE b/n PCR and PLSR): 1.12 %

MSE for PCR and PLS

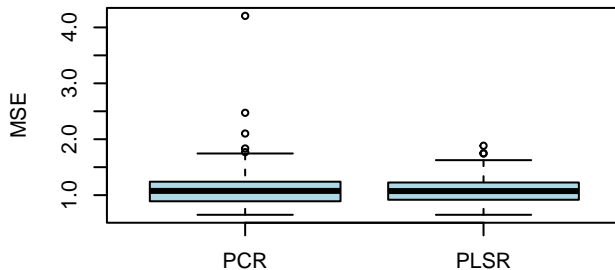

Case III: 1/10 of the dataset has high correlation

(Change in % MSE b/n PCR and PLSR): -23.45 %

MSE for PCR and PLS

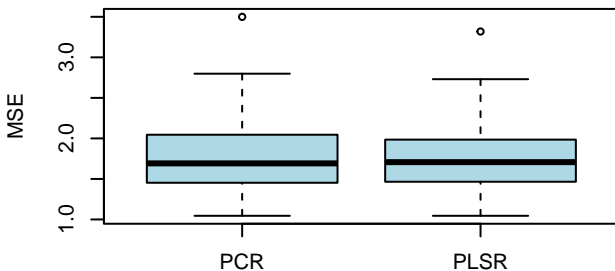

Case IV: all variables are correlated

(Change in % MSE b/n PCR and PLSR): 4.6 %

MSE for PCR and PLS

Case V: Data with no leading/strong factor

(Change in % MSE b/n PCR and PLSR): 0.87 %
